**PROPOSED AMENDMENT**

13. A method of providing an IP address for a host in a computer network, the method comprising the steps of:

receiving at an appliance a request for an IP address associated with a domain name from a client in a computer network;

retrieving the requested IP address from a database associated with the appliance;  
and

transmitting the retrieved IP address to the client;

wherein the appliance includes a processor configured to run an operating system that is optimized to provide a network name-related functionality, including by omitting from the operating system kernel at least one software component that is not required to provide the network name-related functionality.
